The Architectural Image and Early Modern Science: Wendel Dietterlin and the Rise of Empirical Investigation by Elizabeth J. Petcu published by Cambridge University Press in 2025. It is the first English-language book, featuring Wendel Dietterlin (c. 1550–1599),

the polymathic and eccentric artist who was misunderstood. It focuses on how architectural media impelled communication of the evidence-based ideas and arguments between the eras of Dürer and of Rubens. It shows how architectural paintings, sculptures, drawings, and prints created an environment for growth of early modern idea that knowledge derives from sensory experience. This book shows how Dietterlin's empirical imagery of architecture became connected to the image-making practices of early modern scientists and the relationships between architecture and science today. It helps to understand the role of architectural images in the foundations of modern science with connection between the early modern art, architecture and modern empirical philosophy. This volume explores how architectural media became platform for scientific and empirical thinking, showing connection between early modern art, architecture, and science.

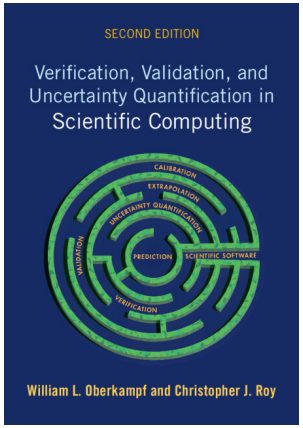
Verification, Validation, and Uncertainty Quantification in Scientific Computing, 2nd ed., by



William L. Oberkampf, W. L. Oberkampf Consulting Christopher J. Roy, and Virginia Tech published by Cambridge University Press in 2025. This book focuses on the reliability and uncertainty of modeling and simulation used by decision makers and policy makers in government and industry. This account offers the methods for combining numerical approximation errors, uncertainty in model input parameters, and model form uncertainty helping estimate the uncertain response of a system in the presence of stochastic inputs and lack of knowledge uncertainty. It presents detailed examples in code and solution verification, model validation, uncertainty quantification, and predictive capability. This edition offers a new look at model accuracy assessment and the responsibilities for modeling and simulation activities. Each chapter was expanded with more homework problems and examples, needed for course use or self-study. Three chapters focuses on how organizations can plan, manage and implement the credibility assessment procedures. This book can be used as a text or supplementary text for undergraduate and graduate courses, including for undergraduates with limited experience in the numerical solution of partial differential equations.

Law, Ethics, and the Visual Arts, 6th ed., by John HenryMerryman, Stephen K. Urice,Simon J. Frankel published by Cambridge University Press in 2025. This book was first published in 1979. Since then, it was the reputable text in the field of art law. The new, 6th edition was updated and reorganized. If offers the refreshing view on the materials and commentaries from the previous editions. The volume was expanded and the important changes have been made in its format and content to influence the current trends in the field. It offers the excerpts from judicial opinions, scholarly and popular articles, the legal stories and colorful anecdotes. You will find in this book the questions, issues, examples, and lessons for readers curious about today's complex world of the visual arts. This book can be used by the artists, dealers, collectors, and attorneys. It also can be used as a text for courses in graduate programs and law schools,

and as a reference material by museum professionals.

Electronic Waste: A Reference Handbook by Josh Lepawsky published by Bloomsbury in 2925. This book explores issues and controversies related to the collection, treatment, disposal, and recycling of electronic waste. It focuses on trends and challenges related to public and environmental health. According the UN, by 2030 the world will produce over 180 billion pounds of electronic waste. These discarded items include cellular phones and computers, solar panels and tvs, household appliances and telecom equipment. This account discusses ways in which our society and economy breaking down the public health, environmental, and social considerations into their e-waste mitigation, disposal, and recycling strategies. It offers the perspectives from the experts of the field of e-waste and provide readers with information about organizations and agencies, events and developments. You will learn about the strategies for thinking critically about e-waste, the total mass and growth rates of e-waste,

e-waste regulations around the world, problems, controversies, solutions, perspectives, and more.

Safety Metrics: Tools and Techniques for Measuring Safety Performance, 4th edition, by Christopher A. Janicak published by Bloomsbury Academic in 2025. This book is a practical guide helping to improve the company's overall performance through evaluation of the safety and health processes and through making the fact-based decisions. It helps with training in the workplace, identifying the fragile areas before an accident or injury happens, showing inconsistencies and data. This account offers a framework for the safety performance measurement program, defining performance goals and objectives, establishing ways to quantify and measure performance. It focuses on methods for tracking safety performance based on potential injured employees, liability losses, and property losses, as well as statistical analysis and data presentation methods. You will learn about the current trends, leadership structure, safety goals and performance

objectives, safety metrics, leading indicators, liability safety metrics, much more.

Marketing: Based on First Principles by Robert W. Palmatier and Andrew Crecelius published by Bloomsbury Academic in 2025. This book explores the four Palmer's principles:all customers differ, all customers change, all competitors react, all resources are limited. It focuses on the modern marketing concept, managing customer differences, understanding customer and organizational buyer behavior, cross-cultural differences, the changing world of retail and omnichannel marketing, marketing research and analytics, managing competitive advantage, advertising, innovation and product-service strategy, managing resource tradeoffs and pricing strategy, much more. It offers the global perspective, focuses on the marketing controversies and such organisations as Beyond Meat, the World Health Organization, Zoom, and IKEA. The multiple case studies help to understand the world of marketing and to develop the methods to deal with the complex problems. The

useful learning features encourage students to reflect critically on the real world situations and different sides of a debate.

The Basics of Public Budgeting and Financial Management: A Handbook for Academics and Practitioners by Charles E. Menifield published by Bloomsbury/ Rowman & Littlefield published in 2025. This book focuses on the key areas of budgeting and financial management, the knowledge important in order to be a successful in the government and nonprofit budget office.
It is connecting the budgetary theory with practical tools. This volume focuses on various concepts, offering in-class and out-of-class exercises, reinforcing those concepts through practical applications. This book also offers an overview of the basic budgeting concepts, types and techniques with discussion of budget cycles and the process. This account focuses on personal services, capital budgets, operating, the ways to fund public budgets, budgeting techniques and analytical models. It is

answering important policy questions. This book also explores cash and debt management, risk management, procurement, incentivizing economic development, cutback management strategies, much more.

Saving Science from Quantum Mechanics: The Epistemology of the Measurement Problem by Emily Adlam published by Oxford University Press in 2025. This book explores relationship between physics and epistemology. It focuses on the quantum measurement problem and links it to the issues in contemporary epistemology. It also focuses on the solving the measurement problem, explaining what to do and which efforts to make. There are many ununswered questions about what happens during the measurement of a quantum system. This account suggests that the measurement problem must be solved to understand which underlying reality could be compatible with the mathematical formalism of quantum mechanics. The current literature on the measurement problem most of the time seeing the problem through the lens of

ontology and metaphysics. This volume seeing the quantum measurement problem as a problem of epistemology. It offers the new perspective and new approach to find the solutions. It also helps clear the field, showing to where the future research should be directed.
